

## **Section 11**

### **Standard Methodology for Conducting Watershed Analysis**

The *Watershed Analysis Manual* is a technical publication required by **Chapter 222-22 WAC**. It is used by qualified scientists to determine conditions of selected public resources, such as hydrology, unstable slopes, water quality, or others, at a specific site. Forest managers develop site-specific prescriptions that further regulate forest practices to protect public resources in the watershed administrative unit (WAU).

The latest version of the *Watershed Analysis Manual* is available at most Washington public libraries. Questions regarding the Watershed Analysis Manual should be directed to:

**Department of Natural Resources**

**Forest Practices Division**
